**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

Claim 1 (previously amended): A system for managing rubber-covered cylinder sleeves for an offset rotary printing machine, said system comprising

a storage apparatus for storing said sleeves when not in use in said printing machine;

a main electronic memory device into which characteristic data for each sleeve can be entered, stored, and managed;

means for introducing the sleeves into the storage apparatus;

means for reading the characteristic data into the memory device as one of the sleeves is introduced into the storage apparatus;

means for determining suitability of said sleeves for a specific print job based on said characteristic data; and

means for removing one of said sleeves from the storage apparatus in accordance with the suitability for a specific print job.

Claim 2 (previously amended): A system as in claim 1 wherein said characteristic data comprise data which identify the individual sleeve and production history information.

Appl. No. 09/973,366  
Amdt. Under 37 CFR 1.116 dated March 29, 2004  
Reply to Final Office Action of January 30, 2004

Claim 3 (original): A system as in claim 1 wherein said storage has individual sleeve storage spaces which are arranged at least one of beside one another and above one another and behind one another and such that they can circulate and such that they can be moved.

Claim 4 (original): A system as in claim 3 wherein said individual sleeve storage spaces can be moved to a storage and removal position.

Claim 5 (original): A system as in claim 1 further comprising an identifier arranged on each sleeve, said characteristic data for each sleeve being assignable to the respective identifier and readable into the main memory device at the time of storage.

Claim 6 (original): A system as in claim 1 further comprising an auxiliary electronic memory device assigned to each said sleeve, said auxiliary electronic memory device carrying an identity number by means of which the characteristic data can be assigned to the respective sleeve and read into the main memory device at the time of storage.

Claim 7 (original): A system as in claim 6 wherein said identity number can be read from the auxiliary memory device into the main memory device at the time of storage.

Appl. No. 09/973,366  
Amdt. Under 37 CFR 1.116 dated March 29, 2004  
Reply to Final Office Action of January 30, 2004

Claim 8 (original): A system as in claim 1 further comprising an auxiliary electronic memory device assigned to each said sleeve, said characteristic data being stored on the auxiliary memory device and read into the main memory device at the time of storage.

Claim 9 (original): A system as in claim 5 further comprising one of a data reader and a scanner by means of which the identifier can be read into the main memory device, at least one of the characteristic data that can be assigned to the identifier and changed characteristic data and data about damage status being exchangeable between the main memory device and computing and memory devices of printing machines, and being stored on the respective memory devices.

Claim 10 (original): A system as in claim 6 further comprising a data reader by means of which the identity number can be read from the auxiliary memory device into the main memory device, at least one of the characteristic data that can be assigned to the identifier and changed characteristic data and data about damage status being exchangeable between the main memory device and computing and memory devices of printing machines, and being stored on the respective memory devices.

Claim 11 (original): A system as in claim 10 comprising one of said data readers associated with said storage apparatus and with each of a plurality of printing units.

Appl. No. 09/973,366  
Amdt. Under 37 CFR 1.116 dated March 29, 2004  
Reply to Final Office Action of January 30, 2004

Claim 12 (original): A system as in claim 11 wherein said data readers are configured as data exchange devices, whereby said characteristic data can be exchanged between the main memory device and the computing and memory devices of printing machines and stored.

Claim 13 (original): A system as in claim 6 wherein said auxiliary memory device provides means for data transmission and exchange between the main memory device and computing and memory devices of the printing machines.

Claim 14 (original): A system as in claim 6 wherein said auxiliary memory device comprises a transponder.

Claim 15 (original): A system as in claim 8 wherein data is read from said auxiliary memory device without contact.

Claim 16 (original): A system as in claim 1 further comprising computing and memory devices of a printing machine, said main memory device being integrated into at least one of said computing and memory devices

Appl. No. 09/973,366  
Amdt. Under 37 CFR 1.116 dated March 29, 2004  
Reply to Final Office Action of January 30, 2004

Claim 17 (original): A system as in claim 1 further comprising computing and memory devices for printing machines, said main memory device and said computing and memory devices being integrated into at least one memory unit.

Claim 18 (original): A system as in claim 1 further comprising a transport apparatus for transporting the sleeves from the storage apparatus to the printing machine.

Claim 19 (original): A system as in claim 1 further comprising means for identifying the sleeves arranged on the storage apparatus.

Claim 20 (previously amended): A system as in claim 2 further comprising means for determining data about the damage status of the rubber-covered cylinder sleeves, said characteristic data further comprising said data about damage status.

Claim 21 (previously amended): A system as in claim 20 wherein said means for determining data about the damage status comprises a hand-held input device into which data about the damage status of the sleeves can be entered.

Claim 22 (original): A system as in claim 20 further comprising computing and memory devices for printing machines, said data about damage status being transmitted to one of the main memory device and the computing and memory devices.

Claim 23 (original): A system as in claim 1 further comprising means for automatically initiating and carrying out ordering of new sleeves by means by said characteristic data stored in said main memory device.

Claim 24 (currently amended): A system as in claim 1 further comprising means for calculating statistics about the probability of failure of the sleeves by means ~~by~~ of said characteristic data stored in said main memory device.

Claim 25 (original): A system as in claim 1 further comprising an auxiliary electronic memory device arranged on each said sleeve, said characteristic data being stored on the auxiliary memory device and read into the main memory device at the time of storage.

Claim 26 (original): A system as in claim 25 further comprising a main data exchange device by means of which the characteristic data can be read from the auxiliary memory device into the main memory device, and at least one of new characteristic data and changed characteristic data and data from the main memory device can be written and stored on the auxiliary memory device.

Appl. No. 09/973,366  
Amdt. dated March 29, 2004  
Reply to Final Office Action of January 30, 2004

Claim 27 (original): A system as in claim 25 further comprising a computing and memory device for each printing machine and an auxiliary data exchange device arranged in each printing unit, said characteristic data being read from the main memory device into the computing and memory device by said auxiliary data exchange device, and at least one of new characteristic data and changed characteristic data from the computing and memory device can be written on said auxiliary memory device.

Claim 28 (original): A system as in claim 25 further comprising a computing and memory device for each printing machine, said auxiliary memory device providing data exchange between the computing and memory device and the main memory device.

Claim 29 (original): A system as in claim 25 wherein each said auxiliary memory device comprises a transponder.

Claim 30 (original): A system as in claim 26 wherein data is between said auxiliary memory device and said main data exchange device without contact.

Claim 31 (original): A system as in claim 25 further comprising a computing and memory device for each printing machine, and means for determining data about the damage status of the rubber-covered cylinder sleeves and transmitting the data to at least one of the main memory device and the computing and memory devices.

Appl. No. 09/973,366  
Amdt. dated March 29, 2004  
Reply to Final Office Action of January 30, 2004

Claim 32 (original): A system as in claim 25 further comprising a computing and memory device for each printing machine and a hand-held input device into which data about the damage status of the sleeves can be entered and transmitted to at least one of the main memory device and the computing and memory devices.

Claim 33 (original): A system as in claim 1 wherein said main electronic memory device comprises an interface which is accessible from an external location.

Claim 34 (original): A system as in claim 33 wherein the characteristic data stored in the main memory device can be called up from the external location via the interface, and new characteristic data can be transmitted into the memory device via the interface and stored.

Claim 35 (withdrawn): A rubber covered cylinder sleeve for offset printing, said sleeve comprising an inner support sleeve, a rubber layer arranged on said inner support sleeve, and an electronic memory device containing characteristic data about the sleeve.

Claim 36 (withdrawn): A rubber-covered cylinder sleeve as in claim 35 wherein said memory device is embedded in the rubber layer.

Claim 37 (withdrawn): A rubber covered cylinder sleeve as in claim 35 wherein said electronic memory device does not effect any widening of the rubber-covered cylinder sleeve.

Appl. No. 09/973,366  
Amdt. dated March 29, 2004  
Reply to Final Office Action of January 30, 2004

Claim 38 (withdrawn): A rubber-covered cylinder sleeve as in claim 35 wherein said rubber layer has a non-printing marginal area, said memory device being arranged in said non-printing marginal layer.

Claim 39 (withdrawn): A rubber-covered cylinder sleeve as in claim 35 wherein said memory device comprises a transponder.

Claim 40 (withdrawn): A rubber covered cylinder sleeve as in claim 35 wherein, by means of a data exchange device, the characteristic data can be read from the memory device, and at least one of new characteristic data and changed characteristic data can be written and stored on the memory device.

Claim 41 (withdrawn): A rubber-covered cylinder sleeve as in claim 40 wherein said data exchange device is at least one of arranged in a printing machine and configured as a portable hand-held device.

Claim 42 (withdrawn): A rubber-covered cylinder sleeve as in claim 40 wherein the data exchange between the memory device and the data exchange device takes place without contact.

Claim 43 (withdrawn): A rubber-covered cylinder sleeve as in claim 40 wherein the data-exchange device can be operated by hand.

Appl. No. 09/973,366  
Amdt. dated March 29, 2004  
Reply to Final Office Action of January 30, 2004

Claim 44 (withdrawn): A rubber-covered cylinder sleeve as in claim 40 wherein the data exchange device is connected to a computing and memory unit in which the characteristic data can be calculated.

Claim 45 (withdrawn): A rubber-covered cylinder sleeve as in claim 43 wherein the data exchange device is connected to a machine control system of a printing machine.

Claim 46 (withdrawn): A rubber-covered cylinder sleeve as in claim 44 wherein the characteristic data can be transmitted manually by an operator to the computing and memory unit.

Claims 47-50 (cancelled)

Claim 51 (previously presented): A system as in claim 1 wherein said means for determining suitability for a specific print job comprises means for determining reusability of said sleeves.
